

GRABBER
GR SERIES

GRABBER combines uniform thickness and maximum strength. Constructed with exceptional quality, **GRABBER** is a reusable, two-sided adhesive interface designed to attach non-adhesive grit papers and polishing discs to the lap. It can also be used between an adhesive coated pad and the lap to provide an additional barrier to slurry penetration. **GRABBER's** uniform .007 thickness preserves the flatness of any material applied.

APPLICATION & BENEFITS

To Attach onto a clean lapping plate:

- 1) Either side may be used up or down. Peel back the protective paper about 2" of one side. Apply exposed adhesive to the edge of the lapping plate. Continue peeling the paper away from underneath while pressing the top side evenly onto the plate avoiding creases and air pockets.
- 2) When the lap-side adhesive is firmly in place, remove the top white protective paper, exposing the adhesive surface
- 3) Apply the desired working material (grit paper or polishing disc) carefully onto the adhesive, a gain avoiding creases and air pockets. The system is now ready to use.
- 4) To remove the working surface only, grip the material above film. To remove both the working surface and the adhesive disc together, be sure to grip under the adhesive carrier which will remove cleanly from the lap without residue.

PHYSICAL CHARACTERISTICS

PHYSICAL PROPERTIES & AVAILABILITY				
MATERIAL	2 - SIDED ADHESIVE		COLOR	WHITE
Size		Approx. Thickness	Thickness w/ PSA	
Pads/Discs	6" - 36"	.007"	N/A	
Sheets	54" x 54"			
Yardage	N/A			
Pressure Sensitive Adhesive	When PSA is specified (pressure-sensitive adhesive), a polyester interface with down side adhesive protected by a removable paper, is applied. The bond to the lapping plate remains firm with various polishing vehicles including water, oil, alcohol, and most commonly used slurries, yet removes cleanly when changed.
