

N-1 combines uniform thickness and maximum strength. Constructed with exceptional quality, a tightly woven wool blend of 75% wool and 25% nylon fabric, N-1 fabric consistently produces a uniform finish. It is brush and shear, finished on both sides for flatness. N-1 cloth has been fully pre-shrunk to maximize strength and use life. The absence of nylon or man-made fibers in its construction (present in many “billiard” cloths) assures that only soft, pliable wool fibers contact work presented throughout the disc life.

**APPLICATION & BENEFITS**

- General final polishing of materials such as glass, fiber optics and hard metals.
- May be used with both polishing compounds and fine diamond solutions.
- Some break in time at lower pressure is recommended to fully charge and compress the working surface for best results.
- An excellent material to leave mounted on the tool for repeated production use.

**PHYSICAL CHARACTERISTICS**

PHYSICAL PROPERTIES & AVAILABILITY			
MATERIAL	WOOL BLEND	COLOR	GREEN
Size		Approx. Thickness	Thickness w/ PSA
Pads/Discs	6" - 36"	.038"	.040"
Sheets	52" x 70"		
Yardage	60" Width		
Pressure Sensitive Adhesive	When PSA is specified (pressure-sensitive adhesive), a polyester interface with down side adhesive protected by a removable paper, is applied. The bond to the lapping plate remains firm with various polishing vehicles including water, oil, alcohol, and most commonly used slurries, yet removes cleanly when changed.
